

## Nichia's Color Tunable COB Receives EdisonReport's Top 10 MUST SEE Award

Brentwood, TN May 13, 2019 — A competitive pool of products prevailed in an otherwise whirlwind of a market since last year's selection. After evaluating all tiers of our bright and innovative industry, EdisonReport is proud to announce Nichia's Color Tunable COB as a Top 10 MUST SEE item for this year's finals.

Nichia's Color Tunable COB provides an innovative CCT tuning solution for human centric lighting applications. Where others use a combination of individual LED's, or multi-cavity phosphor to achieve Color Tunability, Nichia uses a single cavity phosphor technique eliminating the "Tiger stripe" seen in other COB designs.

Available in two sizes, and a CCT range from 2700K to 5000K, Nichia's color tunable COB provides a smaller LES and better color mixing than other options on the market.

EdisonReport's 2019 Judges were Dan Blitzer of The Practical Lighting Workshop, Richard Wyton of Steiner Electric Company, Jim Yorgey of Lutron, and Ann Reo.

The Color Tunable COB can be seen at LIGHTFAIR, May 21<sup>th</sup> thru May 23<sup>rd</sup>, in Philadelphia at booth 1119.

### **About EdisonReport's Top 10 MUST SEE List**

With so many new launches every spring, EdisonReport has traditionally highlighted what we believe are the "Top 10 MUST SEE" products or services. By being online and real-time, EdisonReport can evaluate products a few weeks before the start of the show as opposed to most award programs that require submittals up to three months prior. Our team of judges considers products or services that may not have been ready for submittal earlier in the year.

In addition, at the end of the year, EdisonReport announces the LightTrades™ Awards, which list the ten best products or services introduced throughout the year at all tradeshows.

For more information about the EdisonReport, contact Randy Reid at [Editor@EdisonReport.com](mailto:Editor@EdisonReport.com).
