

RoHS Compliance of Nichia LEDs and LDs

All Nichia LEDs and LDs (except for the LD Slot Modules) on the website and in our LED catalogs from 2006 to present comply with the Restriction of the Use of Certain Hazardous Substances (RoHS) in Electrical and Electronic Equipment as of July, 2006.

Most of the LEDs are Pb-free soldering compatible (Max Soldering Temp. 260 deg. C) so that these LEDs can be used as environmentally safe products.

If you have any questions or concerns regarding the RoHS status of our LED products, please contact our sales team and they will be happy to address your concerns in a timely manner: <http://www.nichia.co.jp/en/contact/contact.html>

If you have any questions or concerns regarding the RoHS status of our LD products, please go to the contacts page listed above and click on “*Inquiries*”. In the field “*Product or sales office you wish to inquire about*” please select *Laser Diode: Japan/Tokyo*
